PROFESSIONAL SUMMARY

Hands-on product designer with 9+ years across software development and product design, focused on AI and developer tools. I turn ambiguous problems into product direction, working prototypes and shipped experiences with Product, Engineering and Research. Experience spans complex workflows, cross-product design systems and 0-to-1 launches, with earlier work in fintech and Web3. Co-author of research evaluated with 43 professional developers; former software developer and design-team manager.

CORE SKILLS

Product design: interaction design, information architecture, systems design, design systems, AI UX, generative AI, LLM workflows, human-AI interaction, developer tools, coded prototyping.

Strategy and research: product strategy, product discovery, qualitative and quantitative user research, participatory design, usability testing, experimentation, product analytics, product management, 0-to-1 launches.

Collaboration and tools: cross-functional leadership, stakeholder alignment, mentoring, people management; Figma, Framer, Amplitude. Supporting craft: visual identity, creative direction, marketing and motion design.

PROFESSIONAL EXPERIENCE

JetBrains | Product Design Lead, AI & R&D

Sep 2025 - Present | Amsterdam, Netherlands

- Established product design in R&D; partnered with Research, Product Management and Engineering to test complete AI workflows before production investment.
- Owned Agentic Markdown end to end: developer research, product framing, a coded five-stage prototype, moderated validation, and a public waitlist test.
- Co-authored Trust-Calibrated Code Review and designed its IDE prototype: 17 discovery participants, 64 review challenges, 43 validation respondents; 72% said they would use the tool. Published as an arXiv preprint in June 2026.
- Built shared patterns for context, plans, execution control and evidence review, plus an internal AI-assisted design system that made IDE prototypes and hypothesis validation faster to prepare.

JetBrains | Product Design Lead, Rider / .NET Ecosystem

Sep 2024 - Sep 2025 | Amsterdam, Netherlands

- Led hands-on design across Rider, .NET and VS Code, connecting contextual AI, agent workflows and Monitoring through shared interaction patterns and release reviews.
- Led AI Assistant for VS Code from product framing to public preview across eight languages; created its visual identity and design system from scratch. The extension recorded 29,370 unique Marketplace installs by 24 Aug 2026.
- Managed three product designers: hiring, individual goals, performance reviews, development, compensation and team composition. Embedded discovery, prototyping and design-quality reviews into product delivery.

JetBrains | Product Designer, .NET Ecosystem

Sep 2022 - Sep 2024 | Munich, Germany

- Designed the first ReSharper AI Assistant for release 2023.2: contextual chat, explanation, issue detection and generation. Built its AI-experience design system and visual identity from scratch.
- Designed Rider developer workflows and established reusable AI patterns; Monitoring shipped in 2024.1 and 2024.2, with further releases under my subsequent lead role.

TON Foundation / The Open Platform | Lead Product Designer / Head of Product Design

May 2021 - Sep 2022 | Remote

- Rebuilt TON's public product around audience-specific paths and led TON Wallet's onboarding, portfolio, transfers, exchange and Telegram integration. Created visual identities for TON and TOP, and Wallet's identity and design system.
- Built and led a multidisciplinary design team anchored by four product designers and spanning motion, graphic and illustration, and marketing design; owned hiring, goals, performance reviews, development, compensation, and team composition.
- Connected product framing, prototype validation and launch-readiness reviews across the portfolio, including Getgems (April 2022 mainnet launch) and STON.fi (Q3 2022 protocol launch).

Yandex / Auto.ru | Lead Product Designer

Oct 2020 - Jun 2021 | Moscow, Russia

- Designed Safe Deal's linked buyer and seller journeys, from service blueprint and prototype to identity checks, protected payment, handover and recovery across web, mobile and employee tools.
- Delivered the design before leaving in June 2021; Auto.ru and Tinkoff launched the service in October 2021 with a reported online process of up to 15 minutes.

Koshelek | Contract Product Designer

Jun 2020 - Oct 2020 | Remote

- Designed the end-to-end Android NFC payment state machine across card provisioning, terminal interaction, processing, success, and recovery.
- Designed for clear device readiness, payment status and safe retry. Public launch context: the November 2020 Visa release supported six banks; Koshelek reported a wider app audience of 16M, not Pay active users.

Simple | Product Designer

Jul 2019 - Jun 2020 | Remote

- Used research, Amplitude analysis, experimentation, and subscription UX to shape Simple's pivot from a fasting timer to a daily program across iOS, Android, Web, and watchOS. Also built its visual identity and design system from scratch.
- The product added 350,000 users in Dec 2019 and exceeded 1 million iOS and Android users by Feb 2020 as a team-level product outcome.

Sber | Product Designer

Jul 2018 - Jun 2019 | Moscow, Russia

- Designed five connected SberMobile journeys - selection, order, activation, payment, and support - across Sberbank Online, telecom, and employee service surfaces.
- Aligned banking, telecom, delivery and employee states so customers could track orders and manage the active service. SberMobile was available in 32 regions by April 2019 (public rollout context).

Alfa-Bank | Software Developer / Product Designer

Jul 2017 - Jun 2018 | Saint Petersburg, Russia

- Moved from software development into product design and redesigned five end-to-end B2B foreign-trade workflows through interviews, journey mapping, adaptive prototypes, usability testing, KPI definition, and delivery.
- Created one reusable service model across web, desktop, and mobile product surfaces for a business unit that reported 53,000 active medium-business clients, 46% annual client growth, and RUB 19B operating revenue in 2018.

SELECTED PUBLICATION

Trust-Calibrated Code Review. Participatory design study on reviewing multi-file changes from LLM agents. JetBrains x Lund University, arXiv preprint, June 2026. <https://arxiv.org/abs/2606.01969>

EDUCATION

Saint Petersburg State University of Aerospace and Instrumentation
Bachelor of Technology, Information Technology | 2013 - 2017
